

A new defoamer especially developed for water based printing ink formulations.

ADD-2548 has been developed to produce rapid de-aeration of all kind of water based ink and coating formulations. It especially has been developed for rotation screen printing inks. **ADD-2548** provides excellent bubble breaking and air release performance. Even at prolonged oven ageing test **ADD-2548** maintains its high performance.

Example in Screen printing:

competition product

0.7% ADD-2548

ADD-2548 is a silicone free mixture of defoaming substances containing hydrophobic silica.

ADD-2548 can be incorporated prior to processing. If it is added subsequently, good distribution must be insured. Addition: 0.5 - 1.0% on total formulation.

ADD-2548 Is also highly effective in water based **coating** formulations
